2015/16

annual

report

highlights

Climatic conditions

Rain-fed agronomy performed poorly during the 2015 / 16 period, due to the drought. Very hot climatic conditions also had an impact on crops produced under irrigation.

Organisational aspects

The Agricultural Marketing and Trade Agency (AMTA), will take the role of implementing agency for NAB, to allow the Secretariat to focus on policy, consultation and monitoring.

The Chairperson of the Board, Mr Kobus van Graan, resigned. The Honourable Minister of Agriculture, Water and Forestry, John Mutorwa formally appointed Ms Sirkka Iileka as the new Chairperson.

Horticulture

Namibia consumed 73,439 tons of horticultural produce in the formal market, worth N\$ 678 million. 23,579 tons were locally sourced. 49,859 tons were imported. The actual MSP achieved for the 2015/2016 financial year was 46%. 7,567 tons of white onions were marketed locally, and 9,288 tons were exported when the local market was over-supplied. 7,055 tons of potatoes were produced locally. A total of 3,213 tons of locally produced potatoes were exported, which could not be marketed in Namibia.

Mahangu

Due to the drought, only 98 tons of mahangu were formally marketed to millers and the National Food Security Reserve. The quantity of mahangu imported has increased by 54.7% compared to the import of 2014.

Wheat

12,366 tons of wheat were harvested, of which 11,411 tons were marketed to millers. 95,190 tons of wheat were imported, to be milled to meet the local consumption demand.

White maize

6,100 tons of white maize produced on dry-land were harvested. 32,800 tons of white maize were produced under irrigation. 120,659 tons were imported, to be milled.

01

corporate

philosophy

vision

To be a leading promoter of a vibrant agronomic industry.

mission

To develop and promote a sustainable and diverse agronomic industry through strong leadership, management, facilitation, advice and regulation in effective partnership with Government and stakeholders.

core values

The NAB strives to uphold the core values of integrity, teamwork, fairness, independent thinking, pro-activity and accountability.

strategic objective

To promote the agronomic industry and to facilitate the production, processing, storage and marketing of controlled products in Namibia.

motto

"...creating a marketing environment that is conducive to growing and processing crops in Namibia..."

02

chairperson's

report

"During the climate of drought, use of market mechanisms gave local farmers the confidence that there would be a market for their crops, and that traders and millers would not compensate for potential threats by increasing imports."

The 2015 / 16 period was characterized by ongoing drought, which brought into focus the vital role that the Namibian Agronomic Board (NAB) must play in ensuring food security for Namibia, through support to agronomic producers and traders, and policy development that secures the sustainability of agronomic sub-sector.

Sustainability of the sub-sector contributes to food security, employment, and poverty alleviation.

The role of NAB is to foster agronomy through policy and regulatory advisory services to the Ministry of Agriculture, Water and Forestry (MAWF), and its Minister, Hon. John Mutorwa. The NAB makes its recommendations and gives advice to MAWF regarding agronomic matters based on consultation with producers, millers, traders and other stakeholders from the industry.

The primary mechanisms to create an environment that is conducive for local production and marketing in the sub-sector are regulatory closed-border periods for imported grains, and the horticultural market share promotion (MSP) scheme. Closed border periods for grains (mahangu, wheat and white maize) are implemented when Namibian production is sufficient. All formally marketed grains in the 2015 / 16 period were purchased by local millers. Under the MSP scheme, traders may only import horticultural produce once a percentage of local purchases has been fulfilled (2015 / 16: 46%).

During the climate of drought, use of market mechanisms gave local farmers the confidence that there would be a market for their crops, and that traders and millers would not compensate for potential threats by increasing imports. Credit in this regard is also due to the traders and millers, who recognised the importance of a viable, local production environment, and their support to producers and the NAB.

The period was also characterized by evolution of the NAB and its institutional environment. Previously the Board's staff performed a number of administrative functions. Some of

these tasks were assigned to the Agro-Marketing and Trade Agency (AMTA), which is now responsible for practical implementation of marketing, processing, handling and trade of all agronomic products. The Agricultural Business Development Agency (AgriBusDev) is now responsible for further development and securing of agronomy through its Green Scheme farms. As a result of its strengthened institutional environment, NAB has been better able to focus on its role as a provider of regulatory and policy advice.

Although legal proceedings were launched by the Namibian Association of Traders in Fresh Produce, against MAWF, AMTA and NAB, the matter was withdrawn when the conditions of AMTA's appointment were made known by the Minister of Agriculture, Water and Forestry.

During the year under review, NAB was faced with pressing, high-level matters that required urgent attention from the various committees of the Board. On the basis of prompt advice, the Minister was able to give valued and timely responses, for which the Board, and myself, express our gratitude.

I thank the Board and committee members for their commitment and hard work to make a success of the year, as well as the highly competent and experienced staff.

I also thank out numerous stakeholders, particularly the producers, traders and millers, for their valued inputs, and patience with the process.

A handwritten signature in black ink, appearing to read 'Sirikka Iileka'.

SIRKKA IILEKA
Chairperson

03

ceo's report

AGRONOMIC PRODUCTION AND MARKETING

Rain-fed agronomy performed poorly during the 2015 / 16 period, due to the drought. Formally marketed rain-fed white maize fell from an average of 35,000 tons during good years, to approximately 6,000 tons. Formally traded mahangu tumbled to an all-time low of 100 tons. The estimated mahangu harvest, including informal trading, was approximately 22,000 tons.

Total domestic white maize production was still 57% of that expected in a year of normal to good rainfall. Rain-fed white maize production was severely impacted by the drought. White maize under irrigation fared better and only fell by 5%. The decline of the crop under irrigation is attributed to excessive heat brought about by drought conditions. Under optimum climate conditions, irrigated white maize production levels are equal to rain-fed white maize production levels.

Wheat, a winter crop produced only under irrigation, had approximately the same number of hectares and yield as the previous year: 11,400 tons from 2,100 hectares, approximately 12% of longer-term average net annual consumption of just under 100,000 tons.

Horticultural fresh produce also suffered from excessive heat caused by drought, resulting in a reduction of 8% in tonnage of local produce formally marketed compared to the previous reporting period. All the same, the Namibian Market Share Promotion (MSP), which compels importing traders to buy a minimum percentage of local produce in monetary terms, achieved 46% overall, against a prescribed 44%.

For the special controlled product **potatoes** (36% of total Namibian horticultural consumption by weight) gains in local production have been modest, but steady. The seasonality of Namibian production and the fact that Namibia has insufficient potato washing facilities, still keep the level of imports unreasonably high.

For the special controlled product **onions** (9% of total Namibian horticultural consumption by weight) it is satisfying to observe

“With the assurance of continued mutual support and cooperation, NAB can confidently rise to the challenges of the coming year.”

the tremendous increase in local production, including for export, albeit seasonal. Onions must still be imported between December and March when the cultivation of onions in Namibia is very risky. In future, NAB may investigate the viability of longer term storage to cover the unfavourable production seasons.

It is intended that, as soon as the teething problems with potatoes and onions have been sorted out, others from the ‘top ten’ (local vegetables) will also be treated as special controlled products.

EVOLUTION, REGULATORY AND LEGAL MATTERS

The 2015 / 16 period brought profound change to NAB. In the past, NAB was responsible for practical implementation of its policy. In future, the Agricultural Marketing and Trade Agency (AMTA), will take the role of implementing agency for NAB, and NAB’s Secretariat will focus on policy, consultation and monitoring. As understanding of the relationship grows, a healthy working relationship is developing.

Advanced legal drafts by Ministry of Agriculture, Water and Forestry (MAWF), are expected to effect decisive amendments to the Agronomic Industry Act. Promulgation of

these amendments will change the status and the functions of the Board considerably, but many of the anticipated changes have already been implemented through the Agent Agreement with AMTA.

The High Court case of the Namibian Association of Traders in Fresh Produce against MAWF, the AMTA and the NAB, regarding the new import levies, proceeded during the year. The case was withdrawn after detailed conditions of the appointment of AMTA as an agent of the NAB were approved by the Honourable Minister of Agriculture, Water and Forestry.

BOARD MATTERS

The Chairperson of the Board, Mr Kobus van Graan, resigned from the position of Chair, as well as the Board. The Deputy Chairperson, Ms Sirkka Iileka, took over in an acting capacity. The Honourable Minister of Agriculture, Water and Forestry formally appointed her as the new Chairperson shortly after. Mr André Compion was appointed Deputy Chairperson. I would like to express my admiration and respect for the way the new Chairperson stepped into the role, with balanced tact and confidence under difficult conditions.

Meetings of the Board, and various focussed Commodity and other Advisory Committees of NAB have functioned

efficiently and effectively under the exemplary guidance of our Chairperson, as well as other Board members who chaired Advisory Committees.

GRATITUDE

I wish to thank all the Namibian producers, processors and traders of agronomic produce, the Honourable Minister of Agriculture, Water and Forestry and his team, the Chair and Vice-Chair and members of the Board and my colleagues in the Board’s Secretariat for their enthusiastic and wise support to the Namibian agronomic industry, to the NAB, and to myself, in particular.

With the assurance of continued mutual support and cooperation, NAB can confidently rise to the challenges of the coming year.

5.1

ESTABLISHMENT OF THE NAMIBIAN AGRONOMIC BOARD (NAB)

NAB was established in terms of the Agronomic Industry Proclamations, AG 11 and AG 12, in 1985. These Proclamations were replaced by the Agronomic Industry Act, Act 20 of 1992. Act 20 defines the Board's powers and obligations. In 2006, the State-Owned Enterprises (SOE) Governance Act, Act 149, was promulgated, and NAB has been monitored by the SOE Governance Council since September 2006.

The Ministry of Public Enterprises (MoPE) was established in 2015, and acts as the supervising ministry for state-owned enterprises. As a result, NAB reports to the Ministry of Agriculture, Water and Forestry (MAWF), and to the MoPE on matters of corporate governance.

5.2

COMPOSITION OF THE NAB BOARD AND BOARD MEETINGS

The members of the Namibian Agronomic Board were appointed by the Honourable John Mutorwa, Minister of Agriculture, Water and Forestry in May 2014 and, in terms of section 4(1) of the Agronomic Industry Act.

Mr Kobus van Graan resigned as Chairperson of the Board on 6 May 2015 and, on 12 May, Minister Mutorwa appointed the Deputy Chairlady, Ms Sirkka Iileka, as the new Chairperson, effective from 6 May 2016. On 11 February 2016, the Minister appointed Mr André Compion as new Deputy Chairperson and, on 18 February 2016, Mr Nico van der Merwe was appointed as Board member in place of Mr André Compion, now the Deputy Chair.

THE BOARD COMPRISES OF:

Sirkka Iileka
(Chairperson)

André Compion
(Deputy Chairperson)

Kaarina Amutenya

Ian Collard

Wilhelmina Handunge

Elizabeth Hilger

Loide Homateni

J Veripi Kandenge

Karl Likuwa

Edward Mataba

Mary Shikukutu

Tarcisius Shingundu

Nico van der Merwe

Mr Kobus van Graan resigned as Chairperson of the Board on 6 May 2015 and, on 12 May, Minister Mutorwa appointed the Deputy Chairperson, Ms Sirkka Iileka, first as Acting Chairperson, then as full Chairperson, effective from 6 May 2016.

In terms of section 4 (4) of the Agronomic Industry Act, the Board may appoint three non-voting advisors to the Board. These are:

Michael Iyambo
Chairperson: NHTT

Gernot Eggert
Chairperson: APA

Leon Nel
MC: NAFTP

The NAB Board held the following extra-ordinary and ordinary meetings during the period under review:

Extra-ordinary meeting: 5 May 2015

Extra-ordinary meeting: 18 May 2015

Ordinary meeting: 23 July 2015

Ordinary meeting: 3 December 2015

Ordinary meeting: 31 March 2016

5.3

INFOGRAPHIC: ADVISORY COMMITTEES OF NAB

ADVISORY COMMITTEES TO THE BOARD AND MEETINGS OF ADVISORY COMMITTEES

5.4

Section 12 (1) (a) of the Agronomic Industry Act makes provision for Advisory Committees to advise the Board in any of its duties.

THE OVERALL ADVISORY COMMITTEE (OAC)

The OAC consists of Board members, knowledgeable in their specific fields, who have the responsibility to discuss matters referred by the Commodity Committees, and the Financial Management Advisory Committee, in order to formulate advice and well-motivated recommendations to the full Board.

THE FOLLOWING BOARD MEMBERS AND ADVISORS SERVED ON THE OAC:

Sirkka Iileka
*Board Chairperson
& Chairperson: NMAC*

André Compion
Chairperson: NMWAC

Ian Collard
*Chairperson: FMAC
& Chairperson: NGPA*

Michael Iyambo
Chairperson: NHTT

Leon Nel
Chairperson: NATFP

The following OAC meetings were held:

25 June 2015

5 November 2015

29 February 2016

FINANCIAL MANAGEMENT ADVISORY COMMITTEE (FMAC)

The FMAC primarily on financial matters such as the financial reporting process, internal financial control audits and financial risks, as well as human resources matters and corporate governance matters.

THE FOLLOWING PERSONS SERVED ON THE FMAC:

Ian Collard
Chairperson: FMAC

André Compion
Board member

Karl Likuwa
Board member

Kaarina Amutenya
Board member

Niek Tromp
*NC Tromp & Co:
External auditors*

Sirkka Iileka
*Board Chairperson:
Ex-officio*

Three FMAC meetings were held during the period under review:

4 June 2015

25 November 2015

11 March 2016

COMMODITY ADVISORY COMMITTEES

The following commodity advisory committees discuss commodity issues and make recommendations to the OAC and the Board:

National Mahangu Advisory Committee (NMAC) with Ms Sirkka Iileka as Chairperson, held 3 meetings:

27 May 2015

6 October 2015

16 February 2016

National Horticulture Advisory Committee (NHAC) / National Horticulture Task Team (NHTT) with Mr Michael Iyambo as Chairperson, held 3 meetings:

28 April 2015

22 September 2015

9 February 2016

National Maize and Wheat Advisory Committee (NMWAC) with Mr André Compion as Chairperson, held 3 meetings:

3 June 2015

15 October 2015

3 February 2016

NAB

administration

SECRETARIAT OF THE NAB

6.1

6.2

FUNCTIONS OF THE NAB SECRETARIAT

On 27 March 2014, the NAB appointed AMTA as its agent to perform certain duties and collect levies. The Secretariat, in cooperation with AMTA, fulfils the following main functions:

- Facilitating the marketing of controlled agronomic crops and regulating the market environment.
- Promoting domestically produced agronomic crops, and fostering and improving the market for all declared crops and products.
- Managing the domestic trade environment, and facilitating the development of grain and horticultural markets to ensure that its stakeholders are not exposed to unfair trading practices.
- Recommending commodity development projects of associations and unions to the MAWF for levy funding.
- Monitoring AMTA regarding the regulatory framework for controlled crops and their products, recommending crops for gazetting, maintaining quality standards and the monitoring of controlled agronomic crops and their products.
- Making recommendations to and advising the Ministry of Agriculture, Water and Forestry (MAWF) on all issues relating to the agronomic industry.

controlled

crops

07

7.1

HORTICULTURE FRESH PRODUCE

OVERVIEW OF HORTICULTURE

All horticulture products are controlled products as gazetted in accordance with Section 2 of the Agronomic Industry Act of 1992.

In the 2015 / 16 financial year, Namibia consumed 73,439 tons of horticultural produce in the formal market, worth N\$ 678 million*. These figures indicate an increase of 1% in tonnage purchased, and an increase of 25% in the monetary value of locally produced horticulture products sold in the formal market, as well as imports.

The significant increase in monetary value is due to the decrease in the supply of certain product lines as a result of the drought in Southern Africa, which caused a sharp rise in fruit and vegetable prices. The effect of the gazettement of the import levy (5%) and general purchasing levy (1.4%) also contributed to a higher monetary value of items traded in the horticulture sector.

The drought affected the Namibian horticulture sector as well, with a reported decrease of 8% in the actual, local tonnage marketed to the formal trade.

The reduction is due to the fact that some producers reduced production as a result of a lack of water resources. Seed germination and pollination challenges were experienced due to high air temperatures, and low humidity caused decreases in yield and poor fruit quality.

* *The calculation is based on prices paid to local producers delivering to traders, and the import price, which excludes the transport cost.*

HORTICULTURE MARKET REGULATIONS

The Namibian Agronomic Board regulates the horticulture industry through the Market Share Promotion (MSP) scheme, which is implemented by AMTA as an agent of the NAB. In terms of the MSP, importers of fresh horticulture products are required to source a minimum percentage of their products from Namibian producers, prior to qualifying for an import permit in a given quarter. If traders do not meet the required percentage, a pro-rata reduced import permit is issued.

The initial MSP was set at 5% in 2005. This increased to 44% in 2015 / 16. The MSP% that traders need to achieve, is established by mutual industry consensus, based on accurate figures, at the National Horticulture Task Team (NHTT) meetings, which are held three times per year.

According to the Government Gazette of 31 December 2014, AMTA collects a 1.4% levy on sales from local producers, 5% on imported horticulture imports and 1.4% from traders as a general purchasing levy.

The objective of the MSP is to create a more dynamic and favourable marketing environment. Traders are encouraged to engage producers through commissioning planting agreements, to increase local sourcing. Producers are therefore motivated to increase production according to market demand, as the marketing risk is reduced. Ultimately, by implementing the MSP, the investment in the Namibian agriculture sector is stimulated.

The main elements of the horticulture market regulations, as implemented by AMTA, are:

1. Implementation of the MSP scheme for all controlled and special controlled products (such as potatoes and onions), which includes the processing of all trader invoices on the Agricultural Marketing Information Database (AMID).
2. Implementation of the trader import permit system.
3. Border control to ensure compliance with the MSP rules.

IMPACT OF THE MARKET SHARE PROMOTION

The MSP for 2015 / 2016 was 46%, calculated on traded value of local horticulture produce. Figure 1 shows the trend for monetary values of locally sourced fresh produce versus imports, as well as the MSP threshold versus actual MSP obtained per quarter. In 2006, during the quarter 1 permit period, the MSP threshold was 12.5% compared to the 19% actual MSP at national level but, in 2016, in the corresponding quarter permit period, the MSP threshold was at 44%, and the actual MSP obtained was 46%. This indicates an increase of 27% more than the actual MSP obtained in quarter 1 permit period of 2006.

FIGURE 1

MARKET SHARE PROMOTION (MSP) PERFORMANCE VS DOMESTIC FORMAL MARKET PURCHASES AND IMPORTS

2006				2007				2008				2009				2010				2011				2012				2013				2014				2015				2016

 Imports (N\$)	 Local purchase value (N\$)	 MSP % threshold	 Actual MSP % obtained
--	---	---	---

IMPACT OF THE SPECIAL CONTROLLED PRODUCT MEASURES

In addition to the MSP rules, certain products such as potatoes and onions entail separate import permit requirements. The objective of the import permit requirement is to ensure that these products are not imported when Namibia has sufficient produce available, according to the required market quality. The local produce is therefore marketed first, before imports can take place.

Onions

In 2015 / 2016 financial year, a closed-border period was instituted for the importation of normal onions from 1 June to 15 December 2015. According to figure 2, these restrictions resulted in an increase of 140% in local marketing of 7,567 tons of onions, compared to 3,149 tons in the 2010 / 2011 financial year. Only 2,939 tons (39% of total demand) were imported between December 2015 and March 2016, and 9,288 tons were exported between June 2015 and November 2015, when the local market was over-supplied.

FIGURE 2

FORMAL DOMESTIC MARKET VALUE AND TONNAGE OF ONIONS

	2011 / 12	2012 / 13	2013 / 14	2014 / 15	2015 / 16
Import (tons)	2,778.47	3,035.53	4,528.70	2,591.14	2,939.00
Domestic (tons)	3,149.49	3,503.72	5,024.70	6,336.82	7,567.00
Domestic value (N\$)	12,755,899	15,617,971	25,837,662	31,779,564	33,820,513
Import value (N\$)	12,299,299	18,504,104	24,673,004	19,927,003	21,972,786

Potatoes

Potatoes are produced seasonally, as they are sensitive to frost and excessive heat. The country's potato production season begins after the last frost, typically in August. This leads to seasonal availability of local potatoes from November in the preceding year to August in the following year.

In the 2015 / 2016 financial year, no closed-border period was instituted for potato imports, due to insufficient availability of locally produced potatoes, especially washed potatoes, which constitute a large percentage of local demand. To stimulate additional demand for local produce, the industry needs to invest in washing equipment, so that more washed potatoes are available during the year, instead of unwashed or brushed potatoes only.

Figure 3 shows that 7,055 tons (26% of total local demand) of locally produced potatoes and a total of 19,651 tons of imported potatoes (74% of the total local demand) were sold in the formal market.

An additional 3,213 tons of brushed potatoes were exported between June and September, as there was an oversupply of brushed potatoes in the local market, while the demand for washed potatoes was not satisfied.

FIGURE 3

FORMAL MARKET VALUE AND TONNAGE OF POTATOES

	2011 / 12	2012 / 13	2013 / 14	2014 / 15	2015/16
 Import (tons)	13,986	13,091	17,786	19,126	19,651
 Domestic (tons)	4,364	4,941	5,417	6,614	7,055
 Domestic value (N\$)	18,727,673	21,109,869	25,816,187	33,134,873	45,876,324
 Import value (N\$)	63,073,346	64,472,392	91,735,698	107,064,702	125,810,885

OVERALL HORTICULTURE MARKET STATISTICS

Market statistics are generated through processing of the tonnage and monetary values of horticulture trader's invoices as submitted to AMTA. The information is captured in the Agriculture Marketing Information Database (AMID) for implementation of the MSP scheme, and analysis of statistics. Statistics are not available for the informal market, and therefore only trade through the formal market is reported.

Market tonnage and value (all horticulture products)

Figure 4 reports the local formal market purchases versus imports in tonnage. During the 2015 / 2016 financial year, 49,859 tons were imported (a 7% increase compared to the previous year), and 23,579 tons were locally sourced (an 8% decrease compared to the previous period). These figures show the negative effect of the drought and heat experienced in Namibia.

FIGURE 4

LOCAL FORMAL MARKET PURCHASES VS IMPORTS IN TONNAGE

	2011 / 12	2012 / 13	2013 / 14	2014 / 15	2015 / 16
Import (tons)	38,047	34,925	47,347	46,631	49,859
Local (tons)	30,009	29,411	36,412	25,728	23,579
Total (tons)	68,056	64,336	83,759	72,359	73,439

In the 2015 / 2016 financial year, 49,859 tons were imported (a 7% increase compared to the previous period), and 23,579 tons were locally sourced (an 8% decrease compared to the previous year). These figures show the negative effect of the drought and heat experienced in Namibia.

Figure 5 reports the local formal market purchases versus imports in values. During the 2015/2016 financial year, the total value for imports was N\$ 503 million (a 29% increase compared to the previous year), and local purchases were N\$ 174 million (a 15% increase compared to the previous year)

Top 10 horticultural fresh products

More than 120 different horticulture products are consumed in Namibia, and these are traded on the formal and informal markets. Figure 6 shows the top 10 formally traded products in tonnage, expressed as a percentage of the total formally traded tonnage. The products which are favoured most by Namibians in the formal market are potatoes (36%), onions (9%), apples (8%), tomatoes (6%), bananas (6%), carrots (4%), oranges (3%), lettuce (3%), cabbage (2%), and cucumbers (2%). In the informal market, cabbage will probably have a much higher market share than in the formal market.

FIGURE 6

TOP 10 FORMALLY TRADED PRODUCE, AS A PERCENTAGE OF THE TOTAL TRADED TONNAGE

PRODUCT	DOMESTIC TONNAGE	IMPORT TONNAGE	TOTAL TONNAGE
Potatoes	7,055	19,651	26,706
Onions	3,726	2,937	6,663
Apples	0	5,889	5,889
Tomatoes	2,771	1,594	4,365
Banana	0	4,324	4,324
Carrots	963	1,683	2,646
Oranges	209	2,088	2,297
Lettuce	997	899	1,896
Cabbage	1,482	228	1,710
Cucumbers	669	787	1,456
Other	5,707	9,780	15,487
Total	23,579	49,859	73,439

Figure 7 shows the top 20 fresh products in tonnage (excluding exports), which were formally traded in the last five financial years (2011-2016). The graph shows the locally sourced tonnage versus imported tonnage separately. Namibia is self-sufficient in cabbage, sweet melons, sweet corn, spinach and watermelons, while most fruit such as apples, bananas, oranges, avocados and pears are imported.

7.2

MAHANGU

On 2 April 2014, in Oshakati, organised producers and millers signed the Mahangu Price Agreement for the floor price formula of mahangu based on the production cost. The mahangu producer floor price for 2016 was set at N\$4,386 per ton (N\$4.39 per kg / N\$79.46 per lata).

The Mahangu Price Agreement is made between organised mahangu (pearl millet) producers and organised mahangu millers, to secure an orderly marketing environment that stimulates additional production and marketing of mahangu.

The floor price is based on the production cost of mahangu per hectare and is adjusted annually by the NAB, on 1 October, with real input cost and inflation.

The production cost increased, compared to N\$3,475 per ton for 2015, as the price of NPK 2:3:2 (37) ZN fertilizer increased. This constitutes approximately 13% of the total cost.

During the period under review, there was a significant increase in the quantity of mahangu imported, compared to the 2014 / 15 period. The imported tonnage increased by 54.7% compared to the previous period, as a result of the poor harvest. The table below is a summary of mahangu hectares planted, harvested and marketed locally, as well as imported mahangu.

TABLE 1 SUMMARY OF MAHANGU PLANTED, HARVESTED, IMPORTED, MARKETED LOCALLY AND PRODUCER PRICE.							
FINANCIAL YEAR	PLANTED (HA)*	ESTIMATED PRODUCTION (T)*	ACTUAL PRODUCTION (T)*	MARKETED PRODUCTION (T)**	QUANTITY BOUGHT BY MILLERS (T)**	IMPORTS (T)**	FLOOR PRICE (N\$/T)

The National Mahangu Consultative Forum (NMCF) was held at Ekulo Secondary School, near Omuthiya, on 21 August 2015. NMCF provided a platform for stakeholders to discuss and elaborate on critical issues for improving mahangu production and marketing.

7.3

WHEAT

Wheat is a winter crop, and can only be produced under irrigation. The crop is planted at the Hardap Irrigation Scheme at Mariental, by a few irrigation farmers in the Maize Triangle, and at the Government irrigation projects next to the Okavango River. The Government irrigation projects are Musese, Sikondo, Uvungu-Vungu, Ndonga Lilena, Mashare, Shitemo, Shadikongoro and Etunda in the Omusati Region.

* Wheaten flour exported: Exported tonnage of flour = approximately 25% to equal tonnage of un-milled grain for the calculation of a realistic total consumption

** Import/export information (volumes) based on border receipts and permits issued. Imports via Walvis Bay only based on permits issued.

12,366 tons of wheat were harvested in October and November.

11,411 tons were marketed to millers, and 95,190 tons of wheat were imported.

FIGURE 9

WHEAT: LOCAL PRODUCTION, GRAIN IMPORTS AND EXPORTS, DOMESTIC CONSUMPTION AND GRAIN PRICE

THE WHEAT MARKETING AGREEMENT OUTLINED THE WHEAT PRICE CALCULATIONS AS FOLLOWS:

Formula A:

30% of the Safex 5-year average (adjusted with inflation) of the actual Safex spot price, plus the transport differential from Upington to Windhoek and 70% of the five-year average Hard Red Winter (HRW) import parity price (adjusted with inflation) from the United States and the ZAR / USD exchange rate, plus the transport via Walvis Bay landed in Windhoek.

Formula B:

30% of the average of the actual Safex spot price for October, plus the transport differential from Upington to Windhoek (as set out in formula A above) and 70% of the average HRW import parity price from the US and the ZAR / USD exchange for October, plus the transport via Walvis Bay landed in Windhoek (as set out in formula B above).

Whichever is highest of:

- The SAFEX 5-year average or the average of the October Safex spot price or
- 30% import parity ex South Africa and 70% import parity via Walvis Bay, landed in Windhoek

will be the fixed price for the marketing period, as from 1 November until 31 January the following year.

These calculations were made with applicable quality adjustment and the differential between FOB and CIF, whilst the full SACU tariff of N\$ 1,224.31 was applied. The 2015 wheat price was calculated on the Safex October average of N\$ 4,624.84/ton which was higher as the Safex 5-year average of N\$ 4,352.16 / ton.

Namibia, like the rest of Central and Southern Africa, produces white maize for human consumption. Corn (yellow maize) is produced for cattle feed.

White maize, as one of Namibian staple food grains, is produced under dry-land and irrigation.

Although local white maize production shows a gradual increase during normal rain-fed circumstances, Namibia remains a net grain importer.

WHITE MAIZE

7.4

TABLE 4

WHITE MAIZE PLANTED BETWEEN NOVEMBER 2014 AND JANUARY 2015 AND THE HARVEST OF THOSE PLANTINGS MARKETING AS FROM MAY TO AUGUST / SEPTEMBER 2015 IN THE MAIN MARKETING SEASON

PRODUCTION AREAS	DRY-LAND		IRRIGATION		TOTAL VOLUME MARKETING (T)
	Planted (ha) Nov 2014 - Jan 2015	Harvested (t) May 2015 - Nov 2015	Planted (ha) Nov 2014 - Jan 2015	Harvested (t) May 2014 - Nov 2015

2012 / 13	36,725	35,712	-	72,438
2013 / 14	5,474	33,553	1,556	40,583
2014 / 15	36,244	35,201	2,012	73,457
2015 / 16	6,100	32,800	0	38,900

* Includes production of the small-scale farmers in the Zambezi Region

** Includes 1,344 tons of WM harvested and exported (not marketed locally)

Depending on rainfall, local maize may become available from 1 May each year. The marketing season therefore commences on 1 May and concludes only when the local harvest is bought and partially milled. This year's poor rainfall resulted in a dry-land production of 0.49 tons per hectare and a total harvest (dry-land plus irrigation) of 38,900 tons. Although the borders remained open for imports during the marketing period, local millers still had to exercise their obligation to buy the local harvest.

The white maize price is usually based on a Safex 5-year average (inflation adjusted) with a transport differential calculated ex Bloemhof, landed either at a location south or north of Otjiwarongo. As from the middle of May 2015, the

Safex price increased to such an extent that it was approximately N\$ 200 per ton higher than the 5-year average. The alternative price formula then became applicable. The basis for this formula is the Safex fortnight weighted average (spot price) of the previous two weeks with the transport differential calculated ex Douglas, landed either at a location south or north of Otjiwarongo.

On 19 May 2015, the maize price was N\$ 3,778.70 per ton, landed at Otjiwarongo and northwards (Otavi) and N\$,3 664.79 per ton landed south of Otjiwarongo (Windhoek). At the end of the marketing period, on 10 August 2015, the maize price was N\$ 4,188.80 per ton landed north of Otjiwarongo (Otavi) and N\$ 4,075.80 per ton, landed south of Otjiwarongo (Windhoek).

08

namibian

processors

NAMIBIAN PROCESSORS

A total number of 28 processors were registered with the NAB, and actively milling. Twenty-two of those mill only white maize, four mill only mahangu, and two mill wheat only. Six mill white maize as well as wheat, two mill mahangu as well as white maize, and one mills white maize, wheat as well as mahangu.

09

international,

regional &

domestic

trade

relations

INTERNATIONAL TRADE

9.1

The SADC – EPA negotiations dominated the time of the Agricultural Trade Forum (ATF). NAB works in close conjunction with ATF. Dr Malan Lindeque of the Ministry of Trade and Industry was instrumental in facilitating the meetings.

Most meetings of the SACU – EFTA (European Free Trade Area), SACU – India, SACU – TIDCA (Industry and Development Coordination Agreement with the USA) were attended, and 'back-to-office reports' and personal consultations were given to interested parties on all meetings.

Two meetings of the WTO Sanitary and Phytosanitary Measures (SPS) Committee were attended. NAB also attended meetings of the SADC SPS Committee.

The Tripartite Free Trade Agreement meetings (SADC, COMESA and EAC) were attended where finances allowed.

DOMESTIC TRADE

9.2

A good working relationship was implemented and maintained with the Ministry of Agriculture, Water and Forestry, and the Ministry of Trade and Industry.

Contact was made with the Representatives of the European Commission, the Embassies of other EU Member States, the Embassy of the United States of America, the High Commission of Great Britain, and the Embassies of Norway and Switzerland.

Meetings related to all agricultural trade in Namibia were attended, and feedback was given to all stakeholders concerning agronomic matters. In addition to grain and agronomic industry development, with inputs from the ATF, these meetings also covered matters related to livestock and meat, and poultry and dairy.

The ATF also held three public dialogues, that are were well attended by the general public. These dialogues were made possible with financial support from the Friedrich Ebert Stiftung in Windhoek.

10

outreach,

pr & awards

OUTREACH AND PUBLIC RELATIONS

10.1

Outreach to producers, millers, traders and other stakeholders is one of the pillars on which NAB makes a meaningful contribution to development of commercial agronomy in Namibia.

By drawing on its strong relationships with the industry, NAB is able to provide sound reporting and counsel to those who formulate policy, particularly MAWF.

To effectively report to policy makers and regulate the agronomic industry, NAB conducts ongoing and regular visits across the country to speak to Area Committees, face-to-face. The requirement for face-to-face meetings was identified by the Area Committees as the most effective means to communicate.

NAB maintains friendly relationships that are inclusive and representative for all in the formal agronomic industry. Where needed, meetings are assisted by translators. NAB also engages with industry bodies and has established expert advisory committees to assist it. The full list of stakeholders and committees can be seen on page 13.

On the basis of its understanding of the industry, and its marketing environment, NAB acts as a regulatory body, and establishes pricing, regulates marketing channel, exports. Imports are regulated through border closure periods, and import permits issued on behalf of NAB by AMTA. Implementation of all regulatory aspects is subject to the approval of MAWF.

At the same time, NAB also informs producers, millers and traders of policy, pricing and regulations, to assist them in effective functioning in the industry environment. In addition to its outreach activities in 2015 / 16, major award events were used to

develop knowledge for producers and traders on various aspects of production and marketing of controlled crops. This was achieved by inviting expert guest speakers to address NAB events. In 2015 / 16, NAB's horticultural division adopted the theme of soil, in line with the UN Food and Agriculture Organisation's theme, 'The International Year of Soils'.

General awareness of the activities and roles of NAB was fostered with information provided to the press on various activities of the Board, particularly NAB awards.

Due to limited commercial marketing of mahangu as a result of the drought, the mahangu and dry land maize awards were cancelled in 2015 / 16. These are expected to resume once the drought has lifted, and mahangu volumes can significantly support commercial milling once more.

The NAB horticultural function successfully pioneered an email newsletter mechanism, running parallel to the website, to inform and augment awareness of producers and stakeholders of events, and production and marketing aspects, that are relevant to them, using email as a direct medium.

NAB uses multiple communication platforms to reach stakeholders. In addition to the various face-to-face meetings, it employs an email newsletter, SMS messaging and its website.

10.2

AWARDS

Master Agronomist Award

The Master Agronomist Award is given annually to a producer who shows a holistic approach to improving his white maize crop, and is evaluated on various aspects such as financial management, staff management and the optimal use of fertilisers to improve the soil.

The award was won by Hendrik Kleynhans of the Sikondo Irrigation Project in the Kavango region. Kleynhans claimed the title for his prowess in cultivating white maize under irrigation.

The Master Agronomist Award was won by Hendrik Kleynhans of the Sikondo Irrigation Project in the Kavango Region.

National Horticulture Day

National Horticulture Day 2015 was celebrated at Noordoewer. The theme of the day was **'Soil – building a productive, food secure Namibia from the ground up'**, in keeping with the UN Food and Agriculture Organization theme for 2015, 'International Year of Soils'.

Drought impact on awards

Due to the drought and its impact on productivity, the Dry-land Champion Maize Farmer Award and the Mahangu Champions Award were cancelled.

National Horticulture Day - Farmer and Trader Awards

Albert van Der Merwe of Farm Sonop at Noordoewer won the Large-Scale Farming Category at the National Horticulture Day 2015. Sonop produces tomatoes, butternuts, green peppers for the Namibian and South African markets, and table grapes for export. Sikondo Irrigation was the runner-up in the large-scale category. The Medium Scale Farming category was won by Jimmy O'Kennedy of Patria at Stampriet, and the runner-up in this category was Thomas Negonga. The Emerging Farmer category was won by Shetuka Shetuka who farms at Olusandja. The runner-up was Bartholomeus Muyenga from Rundu.

The Trader Awards recognise those traders who exceed their Market Share Promotion (MSP) quotas for fruit and vegetables sourced locally. Winners are calculated according to traders' statistics compiled by AMTA. Spar Group won the award in the Mega category, and the runner-up was Woerman Brock Inland. The Very Large category was won by The Market Place. Nabeel Fresh Produce was the runner-up. The Large category was won by Kavango Supermarket. //Kharas Fruit and Veg was the runner-up. Brenners Fruit and Veg won the award in the Medium category, and the runner-up was Oceano Atlantic Trading. The Small-Scale category was won by Kuiseb Fresh Produce. Fonteine Trading was the runner-up.

Winners of the National Horticulture Day farming awards.

FLTR: Jimmy O'Kennedy (medium scale winner) Hansina Christian (Special Advisor to the Governor of the //Kharas Region), Albert van der Merwe (large-scale winner), Sirkka Iileka (NAB Chairperson) Shetuka Shetuka (emerging category winner) and Michael Iyambo (National Horticulture Task Team Chairperson) **Back:** Christof Brock (CEO of NAB) and Cllr Paulus Efraim.

The background of the entire image is a close-up photograph of numerous yellow squash, likely butternut squash, piled together. The squash are a warm, golden-yellow color with some darker spots and stems visible. The lighting is bright, highlighting the texture of the skin.

Republic of Namibia

REPORT OF THE AUDITOR-GENERAL ON THE ACCOUNTS OF THE NAMIBIAN AGRONOMIC BOARD FOR THE FINANCIAL YEAR ENDED 31 MARCH 2016

TO THE HONORABLE SPEAKER OF THE NATIONAL ASSEMBLY

I have the honour to submit herewith my report on the accounts of the Namibian Agronomic Board for the financial year ended 31 March 2016, in terms of Article 127(2) of the Namibian Constitution. The report is transmitted to the Honourable Minister of Finance in terms of Section 27(1) of the State Finance Act, 1991, (Act 31 of 1991) to be laid upon the Table of the National Assembly in terms of Section 27(4) of the Act.

A handwritten signature in black ink, appearing to read 'Junias Etuna Kandjeke'.

JUNIAS ETUNA KANDJEKE
AUDITOR-GENERAL

WINDHOEK, FEBRUARY 2017

11.1

REPORT ON THE FINANCIAL STATEMENTS

The accounts of the Namibia Agronomic Board (herein after referred to as the “Board” as per the Act) for the year ended 31 March 2016 are being presented to the National Assembly in accordance with the Agronomic Industry Act 20, 1992 (Act 21 of 2000).

The firm Strategis Chartered Accountants of Windhoek has been appointed in terms of Section 26(2) of the State Finance Act, 1991, to audit the accounts of the Board on behalf of the Auditor-General and under his supervision.

Figures in the report are rounded off to the nearest Namibia Dollar. Deficits are indicated in brackets.

I certify that I have audited the accompanying financial statements of the Namibian Agronomic Board for the year ended 31 March 2016. These financial statements comprise the following:

Annexure A: Balance Sheet;

Annexure B: Income Statement; and

Annexure C: Notes to the Annual Financial Statements.

The financial statements were submitted by the Accounting Officer to the Auditor-General in compliance with Section 26 of the State Owned Enterprise Governance Act, 2006 except that they were only submitted on 19 October 2016 instead of three months (3 months) after the year end as required by the Act.

11.2

MANAGEMENT’S RESPONSIBILITY FOR THE FINANCIAL STATEMENTS

Management is responsible for the preparation and fair presentation of these financial statements in accordance with Generally Accepted Accounting Practices, and for such internal control as management determines it necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

AUDITOR'S RESPONSIBILITY

11.3

My responsibility is to express an opinion on these financial statements based on the audit. I conducted the audit in accordance with International Standards on Auditing. These standards require that I comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

POWERS AND DUTIES

Section 25(1) (c) of the State Finance Act, 1991, provides that the Auditor-General should satisfy himself that:

(a) All reasonable precautions have been taken to ensure that all monies due to the State are collected, and that the laws relating to the collection of such monies have been complied with;

(b) All reasonable precautions have been taken to safeguard the receipt, custody and issue of and accounting for, the State's assets, such as stores, equipment, securities and movable goods; and

(c) The expenditure has taken place under proper authority and is supported by adequate vouchers or other proof.

In addition, Section 26(1) (b)(iv) of the State Finance Act, 1991, empowers the Auditor-General to investigate and report on the economy, efficiency and effectiveness of the use of the State's resources.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control.

An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

I believe that the audit evidence I have obtained is sufficient and appropriate to provide a basis for the unqualified audit opinion.

11.4

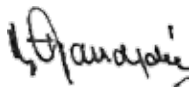

ACKNOWLEDGEMENT

The assistance and co-operation given by the staff of the Board during the audit is appreciated.

11.5

UNQUALIFIED AUDIT OPINION

In my opinion, the financial statements present fairly, in all material respects, the financial position of the Namibian Agronomic Board, and their financial performance and cash flows for the year then ended in accordance with the State Finance Act, 1991.

JUNIAS ETUNA KANDJEKE
AUDITOR-GENERAL

ANNEXURE C

NAMIBIAN AGRONOMIC BOARD NOTES TO THE FINANCIAL STATEMENTS OF THE YEAR ENDED 31 MARCH 2016

1

ACCOUNTING POLICIES

1.1 INTRODUCTION

The annual financial statements set out in Annexures A to B were prepared on the historical cost basis, and incorporate the following principal accounting policies, which are consistent in all material aspects with those applied in the previous year.

1.2 REVENUE RECOGNITION

Revenue comprises grants received from the Government of the Republic of Namibia and from other sources to defray costs necessarily incurred by the Namibian Agronomic Board as well as levies and fees collected in terms of the Agricultural Bank of Namibia Act 2003.

1.3 INVESTMENTS

All investments are initially recognised at cost, being the fair value of the consideration given and including acquisition charges associated with the investments.

1.4 PROPERTY, PLANT AND EQUIPMENT

All property, plant and equipment are initially recorded at cost and adjusted for any impairment in value.

Impairment losses and reversal of impairment losses are recognised in the income statement.

Depreciation is calculated on the straight-line method to write off the cost of each asset, or the revalued amounts, to their residual values over their estimated useful lives. The depreciation rates applicable to each category of property, plant and equipment are as follows:

- Motor vehicles 4 years
- Furniture and fittings 5 years
- Office equipment 3 years

1.5 PROVISIONS

Provisions are recognised when the Board has a present legal or constructive obligation as a result of past events, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation, and a reliable estimate of the amount of the obligation can be made.

1.6 GOVERNMENT GRANTS

Government grants are recognised at their fair value where there is reasonable assurance that the grant will be received and all attaching conditions will be complied with. When the grant relates to an expense item, it is recognised as income over the periods necessary to match the grant on a systematic basis relative to the costs that it is intended to compensate. Where the grant relates to an asset, the fair value is credited to the deferred income account and is released to the income statement over the expected useful life of the relevant asset by equal annual instalments.

PROPERTY, PLANT AND EQUIPMENT
